

Comparison sheet

Compare and choose

How best to protect your data is a matter of how you want to work. The comparisons below have been compiled to help you make an advised choice.

Considerations:

- » Protection of sensitive corporate data
- » Fulfilling legal data protection compliance
- » Speedy deployment of encryption tools
- » Protection of data held or carried on removable media such as USBs, CDs and DVDs
- » Preservation your brand reputation
- » IT security policy control
- » Expedient and timely support

Sophos Endpoint Security and Data Protection	Sophos SafeGuard Enterprise
One product that protects your organisation malware, adware & unauthorised applications	A scalable security solution that grows with your needs
Protects confidential data regardless of where it is written, saved or sent	A role based management system that centrally defines security rules
More efficient machine scanning prevents any performance impact	Data auditing and reporting whenever it is needed
Prevent users from installing inappropriate software that could create loopholes in your security	Encryption manageable in complex and diverse environments via powerful centralized administration
Automatic deployment across your network and multiple platforms	Seamlessly incorporate encryption into existing procedures with single sign-on to the operating system, a customized, graphical pre-boot login screen, and secure password recovery via phone or Web
Reduced management overhead with reliable and expert support	Securely share encrypted data with authorized users and facilitate data recovery by administrators with flexible key ring functionality
Keep updated about virus alerts and outbreak risks via a dashboard and email	A future-proof solution with Microsoft Windows Vista interoperability

Sophos Endpoint Security and Data Protection delivers:	Sophos SafeGuard Enterprise delivers:
Protection of all your platforms with integrated endpoint protection	A modular data protection security solution
Secures sensitive data by encrypting and controlling endpoint devices	Device Encryption transparently protects laptops, removable media, desktops & portable devices
Ensures compliance with defined security standards through assessments and control	Configuration Protection provides granular control over PC ports for data leak prevention

Key features

Preventive endpoint protection	Centralized administration of security policies
Centrally manages Windows, Mac and Linux platforms	Centrally manage encryption and data leakage prevention policies
Single console for anti-virus, firewall, device, application and network access control	Multi-platform security administration with hierarchical definition of security policies
Simplifies and automates administration	Advanced transparent key management for easy secure data sharing and recoverability
Unified agent = less system impact	
Behavioural Genotype Protection detects 90% of new threats without an update	
Controls unauthorized applications	
Identifies disabled patch agents or firewalls and manages all network access	
Simplified encryption	Strong, transparent encryption
Prevents data access, loss or theft with full disk encryption for laptops, desktops and removable storage devices	Prevents data access, loss or theft with full disk encryption for laptops, desktops and removable storage devices
No disruption to end-users, transparent installation and encryption	No disruption to end-users, transparent installation and encryption
Ensures compliance with internal policies and external regulations	Ensures compliance with internal policies and external regulations
	Secure user authentication and authorisation
	Ensures compliance with internal policies and external regulations
	Enables sharing encrypted data across PCs and removable media easily and securely
	Data Loss Prevention
	PC port control prevents data leakage and theft, enterprise penetration and introduction of malware. Granular control detects and restricts data transfer by device type, device model, unique serial number and file type
Trusted Support from the experts	Trusted Support from the experts
Direct support from in-house Sophos experts	Direct support from in-house Sophos experts
Professional services delivered by expert consultants	Professional services delivered by expert consultants
SophosLabs – provide you round-the-clock protection updates
